

Amendments to the claims:

This listing of claims will replace all prior versions and listings of claims in this application.

Listing of claims:

1. (Previously Cancelled)
2. (Previously Cancelled)
3. (Previously Cancelled)
4. (Previously Cancelled)
5. (Previously Cancelled)
6. (Currently Amended) An adhesive layer transfer sheet used for transferring a transferring adhesive layer onto a receptor layer of an intermediate transfer recording medium, comprising [at least] a separable substrate sheet and the transferring adhesive layer formed on the separable substrate sheet,

the transferring adhesive layer comprising [at least] an uppermost layer having an adhesive property suitable for the receptor layer of the intermediate transfer recording medium and arranged at a farthest portion from the substrate sheet, formed of a resin other than ionomer having the glass transition temperature of not less than 60°C, and a basement layer having an adhesive property suitable for a surface of a [transfer-receiving material] natural paper having a smoothness of 10-1500 seconds as Bec's Smoothness, formed of [a different material from a material of the uppermost layer] an ionomer, and arranged at a closest portion from the substrate sheet, and further, an intermediate layer [is] formed of a material having an adhesive property to adhere firmly to both the uppermost layer and the basement layer, and arranged between the uppermost layer and the basement layer.

9. (Cancelled)
10. (Cancelled)
11. (Cancelled)
12. (Cancelled)
13. (Cancelled)
14. (Cancelled)

15. (Currently Amended) An adhesive layer transfer sheet according to claim 6, wherein:

“the adhesive layer transfer sheet further comprises [at least] one coloring material layer selected from the group consisting of sublimation dye layers having [various] a plurality of colors and heat fusible ink layers having [various] a plurality of colors, and the transferring adhesive [later] layer, the layers are formed so as to be laterally arranged along the surface of the substrate sheet,

each coloring material layer is formed as the plane shape and size to fit an individual image forming area allotting on a surface of the transfer-receiving material, on which the image is transferred and formed by using the intermediate transfer recording medium [without wasting the coloring material], and

the transferring adhesive layer is formed as the plane shape and size to fit a receptor layer transfer area of a surface of the transfer-receiving material[, without wasting the transferring-receiving material].

16. (Cancelled)

17. (Previously Presented) An adhesive layer transfer sheet according to Claim 15, wherein each coloring material layer has a smaller area than an area of the transferring adhesive layer.

18. (Currently Amended) A printed product comprises [at least] a transfer-receiving material, a transferring adhesive layer arranged on the transfer-receiving material, and a receptor layer of an intermediate transfer recording medium bearing an image arranged on the transferring adhesive layer, [in which] wherein:

the transferring adhesive layer comprises at least an uppermost layer having an adhesive property suitable to the receptor layer [and adhering to the receptor layer, and a basement layer formed of a different material from a material of the uppermost layer, having an adhesive property suitable to the transfer-receiving material, and adhering to the transfer-receiving material] of the intermediate transfer recording medium, and a basement layer having an adhesive property suitable for a surface of a natural paper having a smoothness of 10-1500 seconds as Bec's Smoothness, formed of an ionomer, and further, an intermediate layer formed of a material having an adhesive property to adhere firmly to both the uppermost layer and the basement layer, and arranged between the uppermost layer and the basement layer.

19. (Cancelled)

20. (Previously Presented) A printed product according to Claim 18, wherein the transfer-receiving material is a passport paper with an identification column.
